

The new word for Comfort

Complete development brief

For the tech team | 2 October 2026

Build a premium private transport platform where customers can book a vehicle and a vetted driver for a day, a week, two weeks, three weeks, a month or a custom period.

Launch in Sylhet, with the system designed to expand throughout Bangladesh. The main experience is a dedicated vehicle and driver for the customer's stay, supported by online payments, discreet family tracking, emergency assistance and personal concierge support.

Customer and driver apps • Booking website • Fleet portal
Operations dashboard • Family tracking • Emergency response

1. Branding and interface

- Use the approved OVK logo.
- Keep the tagline exactly: “The new word for Comfort”.
- Follow the approved premium design direction: charcoal, ivory and subtle champagne accents.
- Deliver a modern, uncluttered interface with clear text, large controls and simple navigation.
- Use actual vehicle photography and professional driver photographs.
- Support English and Bangla across all customer and driver screens.
- Support accessible text sizes, sufficient contrast and different phone sizes.
- Supply editable design files, vector logos, app icons and a reusable component library.
- Use subtle animation without delaying booking or emergency actions.

2. Platforms required

- Customer app for iOS and Android.
- Driver app for iOS and Android.
- Mobile-friendly nominee tracking website, with optional access through the customer app.
- Web-based administration, dispatch and emergency-response dashboard.
- Approved fleet partner portal.
- Customer booking website.
- Shared backend, database and APIs connecting all platforms.

3. Customer registration and accounts

- Register with Bangladeshi, UK and other international mobile numbers using OTP verification.
- Provide email verification and account recovery.
- Store customer name, photograph, contact details, preferred language and saved addresses.
- Allow bookings for the account holder, family members or business guests.
- Keep the payer, booking organiser and travelling passenger as separate records.
- Store passenger preferences and emergency contacts.
- Provide notification preferences, marketing consent controls and account deletion.
- Collect identity documents only for a defined operational requirement.
- Require additional verification for sensitive account changes.

4. Customer home page

Include:

- OVK logo and tagline.
- Selected service city.
- “For the day” and “For my stay” booking options.
- Start date, end date, pickup time and pickup location.
- Vehicle collections: Executive, Family and Premium.
- Upcoming booking or active-stay summary.

- Access to the assigned driver, live tracking and concierge.
- A clearly visible Emergency / SOS button.

Suggested main navigation:

- Home.
- My stay.
- Concierge.
- Account.

Emergency access must remain easy to find during an active booking.

5. Booking process

Customers must be able to:

- Select a city and booking period.
- Enter pickup and end arrangements.
- Choose airport, hotel, home, saved address or map-pin pickup.
- Enter passenger numbers, luggage and additional requirements.
- Add optional flight details.
- Compare vehicles and packages.
- Request a preferred previous driver, subject to availability.
- Review the full price, allowances and cancellation terms.
- Pay online and receive confirmation.

Additional requirements:

- Support daily, weekly, 14-day, 21-day, monthly and custom bookings.
- Allow bookings from overseas before arrival in Bangladesh.
- Support child-seat and accessibility requests, subject to availability.
- Save unfinished bookings.
- Clearly distinguish confirmed bookings from requests awaiting approval.
- Let customers review and correct details before payment.

6. Vehicles and availability

Each listing must show:

- Actual exterior and interior photographs.
- Make, model, model year and category.
- Passenger and luggage capacity.
- Air conditioning and relevant comfort features.
- Verification status.
- Package details and price.
- Whether the booking guarantees that specific vehicle or a vehicle category.

The availability engine must:

- Check availability across the entire booking period.
- Prevent overlapping vehicle and driver allocations.
- Include preparation and turnaround time.
- Block vehicles for maintenance or invalid required documents.
- Temporarily reserve inventory during checkout.
- Release expired checkout reservations safely.
- Handle payment arriving after a reservation expires without creating a double booking.
- Support replacement vehicles with an approval and notification history.

7. Drivers and service standards

- Show driver photograph, name, languages, experience, rating and reviews.
- Store identity, driving licence, references and verification records securely.
- Track required document expiry.
- Prevent assignment when required checks or documents are invalid.
- Record training, uniform and service-standard checks.
- Allow authorised staff to approve, suspend or reject drivers.
- Confirm the assigned driver before the agreed pickup deadline.
- Notify the customer of approved driver changes.
- Support relief drivers and handovers during long bookings.
- Account for driver availability, working schedules and rest periods.
- Display verification badges only for checks actually completed.

8. Packages and pricing

Provide an administration-controlled pricing engine for:

- Daily, weekly, monthly and custom rates.
- Included service hours and kilometres.
- Fuel arrangements.
- Extra hours and kilometres.
- Airport pickups.
- Tolls and parking.
- Out-of-city travel.
- Overnight accommodation and driver expenses.
- Deposits and remaining-balance schedules.
- Discounts and promotional codes.
- Cancellation, amendment and no-show charges.

Before payment, display:

- Included services.
- Excluded costs.

- Package limits.
- Total booking price.
- Amount payable now.
- Remaining balance and due date.
- Rules for additional charges.

Use BDT as the booking and settlement currency. Optional GBP and USD equivalents must be clearly labelled as estimates with the exchange-rate timestamp.

Prices and allowances from mock-ups are illustrative. OVK must supply the final commercial rules.

9. Online payments, invoices and refunds

- Integrate international card payments and suitable Bangladesh payment methods, including bKash and Nagad where supported by the selected providers.
- Support full payment, deposits and balance payments.
- Use provider-hosted or tokenised payment handling.
- Never store raw card details.
- Verify payment notifications on the server.
- Prevent duplicate charges and duplicate confirmations.
- Handle payment failures, pending payments and interrupted checkout.
- Issue receipts and downloadable invoices.
- Support full and partial refunds with authorised approval.
- Display refund progress and outstanding balances.
- Provide finance reconciliation and payment export tools.
- Require customer approval for extra charges unless covered by an explicitly accepted charging arrangement.

10. Managing the customer's stay

“My stay” must show:

- Booking dates and package.
- Assigned vehicle and driver.
- Pickup arrangements.
- Daily journey schedule and multiple stops.
- Driver contact and concierge messaging.
- Hours and kilometres used.
- Included allowances and remaining allowance.
- Approved expenses and additional charges.
- Family-sharing controls.
- Live tracking and Emergency / SOS.
- Payment records and invoices.

Customers must be able to request:

- Additional journeys.

- Changes to pickup arrangements.
- A booking extension.
- Driver or vehicle assistance.
- Cancellation.

Extensions and amendments must check availability, calculate the price difference and obtain acceptance before confirmation. Retain a history of all changes.

11. Live vehicle tracking

- Use installed vehicle trackers where available, alongside driver-app location.
- Identify the source and freshness of location data.
- Show current vehicle position, direction, planned destination and estimated arrival.
- Show the latest update time.
- Clearly indicate stale or unavailable tracking.
- Restrict tracking to authorised service periods and users.
- Continue vehicle tracking when the passenger's phone is offline, provided a vehicle tracking source remains connected.
- Protect tracking history with defined access and retention rules.
- Avoid presenting an old location as a current position.

12. Discreet family tracking and nominees

- Allow the travelling passenger to nominate one or more trusted contacts.
- Require passenger permission or an authorised guardian's permission.
- Send secure invitations to nominees.
- Provide tracking through the OVK app or a mobile-friendly website.
- Show the vehicle location, destination, route, estimated arrival and tracking timestamp.
- Allow sharing for one journey or a selected booking period.
- Let the passenger revoke access immediately.
- Expire access automatically at the selected end time.
- Provide optional pickup, arrival and completion notifications.
- Support alerts for significant route deviations or prolonged unexpected stops, using configurable thresholds.
- Give nominees an "Ask OVK to check" action linked to the booking and location.
- Allow nominees to report an urgent concern to OVK.
- Log access and protect invitations against forwarding or unauthorised use.

Privacy requirements:

- Drivers must not see nominee identities, sharing status or who is viewing.
- Enabling family sharing must not notify the driver.
- Partner accounts must not receive family-sharing details.
- Explain general operational vehicle tracking during driver onboarding.
- Keep individual passenger-sharing activity private.

13. Emergency / SOS system

Place a prominent Emergency / SOS button on the home page, active-booking page and live-tracking screen.

Passenger actions:

- Trigger an urgent alert without completing a lengthy form.
- Optionally identify an accident, medical emergency, hijacking, threat or another emergency after sending.
- Choose a discreet silent alert without sound or driver notification.
- Access a direct emergency-call option.
- Cancel an accidental alert, with the cancellation sent to the response team.

Alert information:

- Passenger name and contact details.
- Booking reference.
- Vehicle registration and description.
- Assigned driver.
- Current or last known vehicle location.
- Location source and timestamp.
- Planned destination.
- Emergency type, if supplied.
- Passenger's preferred safe contact method.

OVYK response workflow:

- Send the incident immediately to the emergency dashboard.
- Alert designated responders through multiple channels.
- Require a responder to acknowledge and take ownership.
- Escalate automatically when acknowledgement is overdue.
- Allow safe contact with the passenger.
- Allow responders to record contact with police, ambulance or other appropriate assistance.
- Notify nominated contacts where enabled.
- Maintain an incident timeline through resolution.
- Keep the alert hidden from the driver; responders control any driver contact.

Reliability requirements:

- Show “Sending”, “Delivered” and “Acknowledged” accurately.
- Display “Help is on the way” only after a responder confirms assistance has been dispatched.
- Provide calling and SMS fallback options where supported.
- Make clear when an alert could not be delivered.
- Do not depend on the driver's phone to send a passenger alert.
- Keep an active emergency open until a responder reviews any cancellation.
- Separate routine concierge requests from emergency alerts.
- Test location denial, weak connectivity, tracking loss and notification failures.

OVYK must define response targets, escalation contacts and staffed coverage for every operating period. The software must support and measure that response service.

14. Ratings and reviews

- Allow reviews only from customers linked to completed services.
- Support driver ratings and overall service ratings.
- Allow written feedback and optional categories such as comfort, cleanliness, punctuality and professionalism.
- Let customers flag a complaint privately.
- Prevent duplicate reviews for the same reviewable service.
- Provide moderation and abuse-reporting tools.
- Keep safety complaints visible to authorised operations staff even if a public review is removed.
- Show ratings with review counts.
- Keep reviews independent of tipping.

15. Tipping

- Offer optional tipping after a completed journey or at the end of the stay.
- Provide suggested amounts and a custom BDT amount.
- Do not preselect a tip.
- Clearly identify the driver receiving it, especially where drivers changed during the stay.
- Take online payment and issue a receipt.
- Allocate 100% of the stated tip to the driver, with OVKY covering processing fees.
- Record tips separately from booking revenue.
- Show drivers their tips and payout status.
- Include tip reconciliation and payout records in finance tools.
- Handle failed payments, refunds and reversals without duplicate payouts.

16. Driver app

Drivers must be able to:

- Log in securely.
- View approval and document status.
- View assigned bookings and daily schedules.
- Accept assignments where required by the operating model.
- Access necessary passenger and pickup details.
- Navigate to pickups and destinations.
- Mark arrival, passenger collection, journey start and completion.
- Record service hours and kilometres.
- Submit toll, parking and other expense evidence.
- Complete vehicle cleanliness and inspection checklists.
- Report delays, breakdowns, accidents and lost property.

- Contact passengers and operations through controlled channels.
- View earnings, tips and payment records according to their terms.

Technical requirements:

- Cache essential assignment details for weak connectivity.
- Queue updates safely and synchronise without duplicates.
- Show location-permission and tracking-health status.
- Provide a separate driver emergency-reporting action.
- Exclude passenger SOS activity and nominee-sharing information from driver APIs and screens.

17. Administration and operations dashboard

Provide role-based access for:

- Administrators.
- Dispatchers.
- Customer support.
- Emergency responders.
- Fleet managers.
- Finance staff.
- Partner managers.

Include:

- Customer, passenger, driver, vehicle and partner management.
- Booking calendar and allocation board.
- Availability and maintenance blocks.
- Live fleet map with tracking-health indicators.
- Manual concierge and telephone bookings.
- Quotes, amendments, extensions and cancellations.
- Driver and vehicle replacement workflows.
- Document approval and expiry alerts.
- Pricing and policy management.
- Payment reconciliation, refunds and tipping payouts.
- Customer conversations and complaints.
- Review moderation.
- Emergency queue, acknowledgement timers and escalation status.
- Incident timelines and resolution records.
- City configuration.
- Reports, exports and sensitive-action audit logs.

Emergency information must be restricted to staff with an operational need to access it.

18. Fleet partner portal

- Register and approve fleet businesses.

- Submit drivers, vehicles and required documents.
- Manage availability and maintenance periods.
- View only their own assignments and financial records.
- Configure agreed commissions and settlement arrangements.
- Track completed services, deductions and payouts.
- Require OVK approval before vehicles or drivers become bookable.
- Apply OVK verification and service standards.
- Prevent access to nominee details, private passenger alerts and unrelated customer records.

19. Concierge and notifications

- Provide customer-concierge and customer-driver messaging.
- Support push notifications, email and SMS.
- Add WhatsApp through an approved integration if selected.
- Send booking, payment, assignment and pickup updates.
- Notify customers of delays, changes, extensions and refunds.
- Provide nominee notifications according to passenger settings.
- Separate marketing consent from essential service messages.
- Track delivery failures and retry critical notifications.
- Allow the emergency team to use the passenger's selected safe contact method.

20. Backend and data structure

Use a shared backend with modules for:

- Accounts and permissions.
- Bookings and daily journeys.
- Availability and allocation.
- Vehicles, drivers and partners.
- Pricing and package rules.
- Payments, refunds, tips and settlements.
- Tracking and nominee sharing.
- Messaging and notifications.
- Emergencies and incident response.
- Reviews and reporting.

Core records must include customers, passengers, bookings, journeys, allocations, pricing snapshots, payments, refunds, tips, nominees, sharing permissions, location updates and incidents.

Technical requirements:

- Maintain one authoritative booking record.
- Keep booking, payment, allocation and emergency statuses separate.
- Preserve the accepted price and policy version for each booking.
- Use transactional allocation checks to prevent double booking.

- Make payment and critical event processing safe to repeat.
- Store timestamps consistently and display appropriate local time.
- Use background jobs for reminders, notifications and escalation.
- Handle tracking traffic separately from ordinary booking requests.
- Support multiple cities and fleets through configuration.
- Prepare extensible service categories for future aviation services; current delivery covers road transport.

21. Security and reliability

- Require multi-factor authentication for administrative users.
- Enforce permissions on the server, including partner isolation.
- Encrypt data in transit and protect sensitive stored information.
- Use private document storage with controlled access.
- Keep integration credentials outside source code.
- Protect OTP, login and invitation endpoints against abuse.
- Define retention periods for documents, messages, tracking and incidents.
- Maintain backups and verify restoration.
- Monitor payment failures, tracking outages and emergency-delivery failures.
- Provide separate development, testing and production environments.
- Maintain an outage and incident-response procedure.
- Avoid exposing sensitive information in notifications, logs or analytics.
- Support account deletion while handling records that must be retained under an approved retention policy.

22. Required testing

Verify:

- Complete daily, 14-day, 21-day and monthly bookings.
- Concurrent attempts to reserve the same driver or vehicle.
- Availability and relief-driver arrangements across an entire stay.
- Payment success, failure, late confirmation and duplicate notifications.
- Deposits, balances, additional charges, refunds and tips.
- Booking extensions, cancellations and replacements.
- Tracking loss and stale-location display.
- Nominee invitations, expiry and immediate revocation.
- Driver and partner inability to access family-sharing or passenger SOS details.
- Silent alerts, acknowledgement, escalation and cancellation.
- Emergency fallback behaviour during connectivity failures.
- English and Bangla layouts.
- International phone registration and card-payment journeys.
- Driver-app synchronisation under weak connectivity.

- Permissions for every staff and partner role.
- Backup restoration and agreed capacity targets.

Run an operational emergency drill with OVK staff before launch.

23. Delivery and ownership

The tech company must deliver:

- Editable interface designs and component library.
- Approved logo assets and app icons.
- Customer and driver apps for iOS and Android.
- Nominee tracking website.
- Administration and emergency dashboard.
- Fleet partner portal.
- Connected customer booking website.
- Source code and database migrations.
- API and integration documentation.
- Automated deployment configuration.
- Test results and resolved-defect records.
- Operations manuals and staff training.
- Monitoring, backup and recovery instructions.
- Agreed maintenance, support and handover terms.

All repositories, hosting, domains, payment accounts, app-store accounts and third-party services must be under OVK's ownership, with appropriate access granted to the tech company.

24. Commercial and operational settings required from OVK

Make these configurable and confirm them before production launch:

- Vehicle categories and actual fleet.
- Service cities and operating coverage.
- Package prices, hours, kilometres and fuel rules.
- Driver schedules and relief arrangements.
- Payment, cancellation and refund policies.
- Partner commissions and payout schedules.
- Emergency staffing, acknowledgement targets and escalation procedures.
- Final English and Bangla content.
- Approved privacy, booking and service terms.

The tech company must build the complete agreed scope above. Any proposed change to functionality, branding or commercial assumptions must be documented and approved before implementation.
